

MONITORING OF TRANSPORT AND CARGO HANDLING

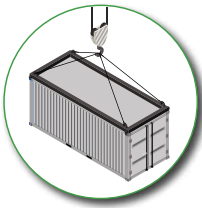

Containers

Knowing what can happen and monitoring the process help to reduce transport damages.

Supply chain visibility & Cargo Monitoring

Containers

➤ Challenges

Report damage within the required time-frames.

Broken or damaged parts caused by impacts & shock.

Sensitive to temperature and humidity changes.

Logistic Monitoring

➤ Solution

View and reveal all critical movements

Determine transport routes

Monitor Shock & Impacts, temperature and humidity

Data Analysis

➤ Benefits

Substantiate any guarantee or insurance claims

Determine who is responsible

Identify improper packing and handling

Cargolog®, a hightech tool, provides you with independent data throughout the logistics chain, which could be crucial in a guarantee or insurance case.

With over 30 years of experi-

ence, we have all the necessary knowledge to help our customers reach their goals. In addition, our staff of professionals has the expertise and dedication needed to provide you with accurate and prompt services to use the

Cargolog® System.

Thank you for doing business with us or considering our services for future needs.

Container Monitoring System

We believe in transparency throughout the transportation chain. With Online tracking, you can follow your goods and get real-time data and notifications. See how your products are handled, notify your customer, and take immediate action without any delay.

Improve and Optimize the operation efficiency with a connected supply chain

Monitor conditions remotely

In case of damage during transport, analyze the specific event, day, time, or value to discover the cause.

Secure storage of data

Secure the storage of data directly in the internal memory and the cloud service.

Take immediate action

Warn the receiver or haulier so they can inspect the goods for damages before arrival at the final destination

See the location in real-time

See the GPS position and follow your cargo directly in the cloud service during the transport.

Improved collaboration

Let team members access the same data anywhere, any-time. Easier access to information results in improved collaboration and leads to increased productivity.

Multiple Installation

Installation outside container Online Tracker

- Real-time Tracking with GPS positioning
- Unlimited operating times.
- High protection: IP67
- Impact protect classification: IK09

Installation inside container Standard Recording

- Easy installation with magnets.
- Unlimited operating times.
- Easy transferring of data with integrated Bluetooth

Why choose us?

CUSTOMIZED

Together we can customize the product to suit your business. All development and manufacturing take place directly at our head office in Sweden

ENSURE THE ACCURACY

Each data logger is tested and calibrated following international references. High quality products with accurate and reliable data.

WE WILL HELP YOU

We are an independent player who provides you with documented facts. We can help you with a project from start to finish or with a specific task.

TRAINING AND EDUCATION

We will help you with technical training and education to optimize the use of our products to achieve the goals set in the project.

Trusted since 1991
